African Gig-Economy & Digital Wallet Risk Dashboard

Visual Build Manual v3 — Table Format

Audience: junior Power BI developer, Power BI Desktop July 2026 build or later (new Card visual, GA since Nov 2025). **Scope:** report canvas only — the semantic model (97 measures in `_Measures`) is already built. Wire visuals to it; don't touch the model.

Two things to know before you start

1. **Every CF measure is hard-wired to one fixed condition** (e.g. `[CF Channel Fraud Color]` always evaluates USSD, no matter what a chart axis shows). So CF only ever goes on the one Card it was built for — never on a multi-category chart's Data colors, or every bar/category would render the identical color. The single exception is `[CF Market Fraud Share Color]` on the Page 3 table, which is context-aware.
2. **Two chart techniques used repeatedly below:**
   - *Multi-measure, no axis:* when two measures have no shared dimension (e.g. new vs tenured accounts), drag both straight into a chart's **Values** well and leave **Axis** empty — Power BI auto-labels each column with the measure name.
   - *Generic measure on a real column:* where a dimension column already exists (channel type, regulatory tier, gig segment, KYC tier, is_month_end, is_weekend), the chart uses the plain underlying measure (e.g. `[Fraud Rate %]`) on that axis instead of the named sub-measures — richer chart, same numbers, no extra model work. The named sub-measures (`[USSD Fraud Rate]`, `[Tier1 KYC Fraud Rate]`, etc.) are reserved for their KPI cards and CF coloring.

Page 1 — Executive Overview

#	Visual Type	Fields	Format & Wiring
1	Card ×1 (page header)	Callout value: `[Title Exec KPI Strip]`	Format pane → General → Title → toggle off (the callout text itself is the dynamic headline). Font size 20–24pt, no background, span the full page width.
2	Card ×6 (hero KPI row)	`[Total Transactions]` / `[Total Volume USD]` / `[Fraud Rate %]` / `[Dispute Rate %]` / `[Reversal Rate %]` / `[Success Rate %]` — one card each, placed in a row	Format pane → find 'Callout value' → click fx → Format by: Field value → `[CF Fraud Rate Color]` on the Fraud Rate % card, `[CF Dispute Rate Color]` on the Dispute Rate % card, `[CF Success Rate Color]` on the Success Rate % card (inverted on purpose — green at HIGH values, this is correct). (If your Desktop shows the newer Card visual, the same fx icon sits next to 'Data label' color instead — same idea, different label.) For background tint: General → Effects → Background → toggle on → fx → Field value → `[BF KPI Fraud Card]` on Fraud Rate %, `[BF KPI Dispute Card]` on Dispute Rate %, `[BF KPI Reversal Card]` on Reversal Rate %. Add a small 7th card beside Fraud Rate % bound to `[CF Fraud Trend Icon]` for the ▲/▼ glyph — no color

#	Visual Type	Fields	Format & Wiring
			wiring needed, it's already text.
3	Card ×3 (secondary KPI row)	`[Avg Transaction Value USD]` / `[Total Fraud Loss USD]` / `[Active Transacting Workers]` — one card each	No conditional formatting — plain Callout value cards.
4	Clustered column chart (or Donut)	Legend/X-axis: `fact_transactions[transaction_outcome]` · Y-axis/Values: `[Total Transactions]`	Title: fx → Field value → `[Title Outcome Mix]`. No CF — this is a multi-category chart, see note #1 above.
5	Clustered column chart	X-axis: `dim_channel[channel_type]` · Y-axis: `[Total Fraud Loss USD]`	Title: fx → Field value → `[Title Fraud Snapshot]`.
6	Card ×3 (insight strips)	`[Insight Fraud Overview]` / `[Insight Dispute Overview]` / `[Insight Volume Overview]` — placed under their related chart/card cluster	Callout value → each Insight measure. Format pane → Callout value → Font size → 12–14pt. Widen the card until the sentence wraps to 2–3 lines, not 1.

Page 2 — Fraud & Risk

#	Visual Type	Fields	Format & Wiring
1	Clustered column chart	X-axis: `dim_channel[channel_type]` · Y-axis: `[Fraud Rate %]`	Title: fx → Field value → `[Title Channel Fraud]`. This generic measure naturally shows all 5 channel types, not just USSD vs app.
2	Card ×3	`[USSD Fraud Rate]` / `[App Fraud Rate]` / `[USSD to App Fraud Multiplier]`	Callout value → fx → Field value → `[CF Channel Fraud Color]` on the USSD Fraud Rate card only.
3	Clustered column chart	Axis: *(leave empty)* · Values: `[New Account Fraud Rate (<90d)]` + `[Tenured Account Fraud Rate (90d+)]` (drag both into Values)	Title: fx → Field value → `[Title Tenure Fraud]`. See note #2 above — multi-measure, no axis.
4	Card ×2	`[New Account Fraud Rate (<90d)]` / `[New vs Tenured Fraud Multiplier]`	Callout value → fx → Field value → `[CF Tenure Fraud Color]` on the New Account Fraud Rate card only.
5	Clustered column chart	Axis: *(leave empty)* · Values: `[High Velocity Fraud Rate]` + `[Low Velocity Fraud Rate]`	Title: fx → Field value → `[Title Velocity Fraud]`.
6	Card ×3	`[High Velocity Fraud Rate]` / `[High Velocity Reversal Rate]` / `[Velocity High Threshold (P75)]`	Callout value → fx → Field value → `[CF Velocity Fraud Color]` on the High Velocity Fraud Rate card only. Threshold card: shrink font, gray tone — it's a reference number, not a KPI, keep it visually quiet.
7	Card ×3	`[Digital Channel Fraud Rate]` / `[Physical Channel Fraud Rate]` / `[Fraud Loss per Flagged Txn]`	No conditional formatting.

#	Visual Type	Fields	Format & Wiring
8	Card ×3 (insight strips)	`[Insight Channel Risk]` / `[Insight Tenure Risk]` / `[Insight Velocity Risk]`	Same as Page 1, row 6 — Callout value + 12–14pt font, widen to wrap.

Page 3 — Market & Channel

#	Visual Type	Fields	Format & Wiring
1	Donut chart (or clustered column)	Legend/X-axis: `dim_market[country]` · Values: `[Country Fraud Volume Share %]`	Title: fx → Field value → `[Title Market Fraud]`.
2	Card ×3	`[Nigeria+Kenya Fraud Share %]` / `[Top Fraud Market]` / `[Avg Market Fraud Index]`	No conditional formatting. `[Top Fraud Market]` is a text measure (a market name) — Card visual handles text Callout values natively, nothing special to configure.
3	Clustered column chart	X-axis: `dim_market[regulatory_tier]` · Y-axis: `[Fraud Rate %]`	Title: fx → Field value → `[Title Regulatory Tier]`.
4	Card ×2	`[High Regulatory Tier Fraud Rate]` / `[Medium Regulatory Tier Fraud Rate]`	Callout value → fx → Field value → `[CF Regulatory Tier Color]` on the High Regulatory Tier Fraud Rate card only.
5	Donut chart	Legend: `dim_channel[is_digital]` · Values: `[Total Transactions]`	Title: fx → Field value → `[Title Channel Mix]`.
6	Card ×1	`[Digital Channel Share %]`	No conditional formatting.
7	Table	Columns (in order): `dim_market[country]`, `[Country Fraud Volume Share %]`, `[Avg Market Fraud Index]`	Title: type "Market Fraud Comparison" directly (static, no fx). Click the ▼ dropdown on the `Country Fraud Volume Share %` column header → Conditional formatting → Font color → Format by: Field value → `[CF Market Fraud Share Color]` — the one CF measure safe for table use (see note #1 above).

#	Visual Type	Fields	Format & Wiring
8	Card ×3 (insight strips)	`[Insight Market Concentration]` / `[Insight Regulatory Tier]` / `[Insight Channel Digital Mix]`	Same D pattern as Page 1, row 6.

Page 4 — Worker Segments

#	Visual Type	Fields	Format & Wiring
1	Clustered column chart	X-axis: `dim_worker[gig_segment]` · Y-axis: `[Dispute Rate %]`	Title: fx → Field value → `[Title Segment Disputes]`. Generic measure naturally shows all 4 segments.
2	Card ×5	`[Market Trader Dispute Rate]` / `[Ride Hailing Dispute Rate]` / `[Delivery Rider Dispute Rate]` / `[Freelance Creative Dispute Rate]` / `[Top Dispute Segment]`	Callout value → fx → Field value → `[CF Segment Dispute Color]` on the Market Trader Dispute Rate card only. `[Top Dispute Segment]` is a text measure, no CF needed.
3	Clustered column chart	X-axis: `dim_worker[kyc_tier]` · Y-axis: `[Fraud Rate %]`	Title: fx → Field value → `[Title KYC Risk]`. Generic measure naturally shows tier_1, tier_2, tier_3.
4	Card ×3	`[Tier1 KYC Fraud Rate]` / `[Tier3 KYC Fraud Rate]` / `[Avg Tenure Days (Active Workers)]`	Callout value → fx → Field value → `[CF KYC Tier Fraud Color]` on the Tier1 KYC Fraud Rate card only.
5	Card ×2 (insight strips)	`[Insight Segment Disputes]` / `[Insight KYC Tier Risk]`	Same D pattern as Page 1, row 6.

Page 5 — Temporal & Transactions

#	Visual Type	Fields	Format & Wiring
1	Clustered column chart	Axis: *(leave empty)* · Values: `[Month-End Cash-Out Share %]` + `[Non Month-End Cash-Out Share %]`	Title: fx → Field value → `[Title Month End Pattern]`. See note #2 above — multi-measure, no axis.
2	Clustered column chart	X-axis: `dim_date[is_month_end]` · Y-axis: `[Reversal Rate %]`	Title: fx → Field value → `[Title Reversal Pattern]`. Generic measure naturally slices True/False off the real column.
3	Card ×2	`[Month-End Reversal Rate]` / `[Non Month-End Reversal Rate]`	Callout value → fx → Field value → `[CF Month End Reversal Color]` on the Month-End Reversal Rate card only.
4	Clustered column chart	X-axis: `dim_date[is_weekend]` · Y-axis: `[Fraud Rate %]`	Title: fx → Field value → `[Title Weekend Pattern]`.
5	Card ×4	`[Weekend Fraud Rate]` / `[Weekday Fraud Rate]` / `[Weekend Transaction Share %]` / `[Peer Transfer Share %]`	Callout value → fx → Field value → `[CF Weekend Fraud Color]` on the Weekend Fraud Rate card only.
6	Card ×2 (insight strips)	`[Insight Month End Cashflow]` / `[Insight Weekend Behavior]`	Same D pattern as Page 1, row 6.

Final QA checklist

- [ ] Every fx-wired card changes color when sliced by a date-range or country slicer
- [ ] No chart has a CF measure wired to its Data colors — verify none of the 12 charts across 5 pages picked one up by accident
- [ ] The 3 BF hero cards (Fraud, Dispute, Reversal on Page 1) show a subtle dark tint, not a harsh block
- [ ] All 11 Insight cards wrap to 2–3 lines cleanly, not truncated
- [ ] All fx-wired titles update live when a slicer changes

Known gaps (flagged, not fixed — your call)

- **Reversal Rate % (Page 1, row 2)** has no CF measure. Same 5-minute build as any other CF measure if you want one added.
- **BF was trimmed from 8 measures to 3** (Page 1 hero row only) in a prior session — flag if you want any of the 5 removed ones rebuilt.
